

These mushrooms have been spotted growing under fir trees along the Clackamas River corridor. They are about six inches tall.

A suggested identity is that it is a Gyromitra?

Is there a corroboration out there for that name or does someone know the scientific identity of these two mycological miracles?

FILL IN YOUR SUGGESTIONS

1. Maybe "False Morel" (a common name)
Very poisonous, do not eat!!!

2. _____

3. _____
